#### Summer & Winter Inspections

The Local Maintaining Agency (LMA) is responsible for summer and winter inspections. The LMA is required to submit a report regarding summer and winter inspections to the California Department of Water Resources (DWR).

DWR must be informed on the:

- a) completion of the inspection
- b) any changes other than the results of normal maintenance
- c) corrections to deficiencies noted in this report

If additional items are noted, further documentation of those items must also be submitted.

The LMA should submit this information to DWR using the LMA web application tool available at:

#### http://cdec.water.ca.gov/lma.html

If the LMA is unable to submit information on this webpage, please contact DWR for assistance.

The LMA should submit the information and any associated documentation by September 30 for summer inspections and March 31 for winter inspections.

UCIP Comments: 07/13/2018 Dense vegetation on LS slope limits visibility. Crossing remains "Urgent" due to unknown condition of the pipe section through the levee. (O.Yakimov-DWR UCIP) 03/08/2018 LS pipe section replaced however, unable to determine the condition of the pipe section through the levee. LS levee section disburbed and has not been repaired. Crossing remains Urgent due to the unknown condition of the pipe section through the levee. (O. Magana - DWR UCIP)12/02/2016 Same as last inspection signs of leak are still present on both LS and WS. Recommend internal inspection of the pipe integrity though the levee to determine cause of depression on levee (either leak or poor compaction). Pipe debris previous noted on WS has been removed. (O. Magana - DWR UCIP)06/11/2013 Signs of leak in pipe at levee slope on both LS and WS where pipe enters levee. Moist soil at LS toe indicates possible internal leak. Evidence of recent pipe repair on WS. Pipe debris on WS toe should be removed. (W. Wylie -DWR UCIP)

FIELD\_STRUCT\_DESC: 12-inch steel irrigation pipe through the levee, 5 feet below the crown. Slant pump located on the waterside (WS). Siphon breaker and switch box also located on the WS slope. Service pole is located on the landside (LS) slope. (12-inch pipe authorized under Automatic Board Order (ABO) issued as Permit No. 11203, 1971 - Delta Farmers, Inc.) This crossing has been replaced with 6-inch under DSID 25486, as reported by DWR inspector Richard Willoughby during his Spring 2017 inspection. [Additional Reference(s): DWR Levee Log, 2005. FS ID:52731 DS\_ID:20131 EP\_NO: 11203 Repair Type: Urgent Crossing Status: Found

UCIP Comments: 07/13/2018 Dense vegetation on LS slope limits visibility. Crossing remains "Urgent" due to unknown condition of the pipe section through the levee. (O.Yakimov-DWR UCIP) 03/08/2018 LS pipe section replaced however, unable to determine the condition of the pipe section through the levee. LS levee section disburbed and has not been repaired. Crossing remains Urgent due to the unknown condition of the pipe section through the levee. (O. Magana - DWR UCIP)12/02/2016 Same as last inspection signs of leak are still present on both LS and WS. Recommend internal inspection of the pipe integrity though the levee to determine cause of depression on levee (either leak or poor compaction). Pipe debris previous noted on WS has been removed. (O. Magana - DWR UCIP)06/11/2013 Signs of leak in pipe at levee slope on both LS and WS where pipe enters levee. Moist soil at LS toe indicates possible internal leak. Evidence of recent pipe repair on WS. Pipe debris on WS toe should be removed. (W. Wylie -DWR UCIP)

FIELD\_STRUCT\_DESC: 12-inch steel irrigation pipe through the levee, 5 feet below the crown. Slant pump located on the waterside (WS). Siphon breaker and switch box also located on the WS slope. Service pole is located on the landside (LS) slope. (12-inch pipe authorized under Automatic Board Order (ABO) issued as Permit No. 11203, 1971 - Delta Farmers, Inc.) This crossing has been replaced with 6-inch under DSID 25486, as reported by DWR inspector Richard Willoughby during his Spring 2017 inspection. [Additional Reference(s): DWR Levee Log, 2005. UCIP Comments: 07/13/2018 Pipe is open on LS. Same as last inspection. (O.Yakimov-DWR UCIP)12/02/2016 According to LMA representative, Darcy Neuderk, this crossing was installed in 1952 by the USACE and intended to be use for irrigation purposes. However, this crossing has never been used per LMA's knowledge. Crossing has been downgraded from "Urgent" to "Non-Urgent", the flap gate on the WS is functional and prevents any potential flood water from draining to LS. Recommend contacting property owner and working with the CVFPB to address abandoned crossing. (O. Magana - DWR UCIP)06/11/2013 Flap gate rusted in closed position. (W. Wylie - DWR UCIP)

UCIP Comments: 07/13/2018 Leak seems to be fixed by the owner by installing steel clamps at pipe join above the standpipe, although could not verify if leak stopped. Site is still vegetated. Crossing remains "Urgent" due to unknown condition of the pipe section through the levee. (O.Yakimov-DWR UCIP)12/02/2016 Dense vegetation around concrete standpipe located on LS toe assume issue recorded back in 2013 is still present due to the dense vegetation around structure. Need to contact owner. Owner will need to coordinate with the CVFPB to address the leaky concrete standpipe and the new metal case installed on WS slope (section of levee still opened). (O. Magana - DWR UCIP)06/11/2013 Concrete standpipe on LS toe is not functioning properly. Leaks springing up in the ground around the standpipe. This may erode the soil at base of levee. (W. Wylie - DWR UCIP) FIELD\_STRUCT\_DESC: 12-inch steel irrigation pipe through levee, 3 feet below the crown. Slant pump is located on the waterside (WS) toe. 36-inch concrete standpipe and pipe works visible on the landside (LS) toe. Siphon breaker in 24-inch corrugated metal pipe (CMP) riser located on the LS shoulder. Pipe replaced 12-inch pipe from O&M manual/Permit No. 11207. (Permit No. 13311, 1982). (12-inch replaced under Permit No. 13311, 1981 - P. L. Lykins Ranch; 12-inch pipe authorized under Automatic Board Order (ABO) issued as Permit No. 11207, 1975 - Fong) FS Date: 7/13/2018

S1: Repair slope instability.

#### Inspector Comment

Slope damage on landside shoulder and slope has been in place for several inspection cycles. Proper drainage should be provided to prevent further erosion, and erosion should be repaired.

Dense woody vegetation (up to 6" in diameter) along lower slope and toe prevents inspection and access. Needs to be removed.

2017 Site ID: GEO 6.3 L

Status: Critical

2018: Do not see evidence of vertical face erosion from levee hinge. I do not see how this could be rated critical (Djulian).

2017 Field Notes: Upgraded to CRITICAL. Combined with 6.8. Vertical sections from mid slope to toe, vertical face from levee hinge at some locations. Wave/tide erosion at toe, evidence of beavers.

Site History: 1997 - Deep pockets of erosion and narrow berm. Reach is characterized by lots of pockets into the existing berm and/or levee slope. 1999 - Some pockets filled with rock riprap. 2000 - Exposed fabric. 2001 - Staked, low fascine walls at bankline. 2002 - New spot of rock at upstream end. Some new brush boxes. 2005 - Some stone sliding off the underlying geotextile fabric. Some new brush bundles in the brush boxes; some with missing bundles. Some boxes too low relative to high tide. 2009 - Minimal new erosion, site length extended. 2010 - New erosion on downstream end, site extended downstream. 2011 - Sites 6.1. 6.4 and 6.6 were combined. New erosion pockets, site extended to include the erosion in between the old sites. 2012 -Rock has been placed in portions of the bank since last year. 2016 -Site 5.8 was merged with this site due to new erosion connecting the sites.

### Inspector Comment

2017 Site ID: GEO 0.3 L

Status: Eroding

2017 Field Notes: Site shortened. New rock placed on levee slope in

erosion pockets.

Site History: 1997 - Erosion pockets into the levee toe. 1999 - Some small pockets fixed with rock riprap. 2002 - New "brush boxes" along the bank toe. 2005 - Brush boxes are empty. Some pockets are filled with new stone. 2006 - Some new rock at the downstream end (~100 ft long). Several small pockets of new rock in scallops. Brush boxes in poor to fair condition. 2010 - Site looks a little worse, some toe rock but still has erosion scars at lower to mid slope. 2011 - Site upgraded to CRITICAL. Significant new erosion. Erosion scallops are vertical and almost the height of the levee. 2012 - Rock has been placed in some of the erosion scallops and therefore the site is no longer critical. 2013 -Site shortened site. The downstream half of site was repaired by RD. Pipe no longer in site limits.
